# World's Widest Bushi

## SKF – number one in bearings

Made by SKF® stands for excellence. It symbolises our consistent endeavour to achieve total quality in everything we do. We provide our customers with outstanding bushing quality.

## SKF – your only bushing partner

Using our global sales network and logistics expertise we offer a delivery service level far beyond that of any competitor. With the world's widest bushing stock assortment distributors and end users now have the solution for most industries and application needs from one single source.

## SKF – we help to select the right bushing for you

Throughout the world we are recognised as the leading rolling bearing manufacturer. We are renowned for our excellent technical support and application know-how. However, we are also a major player in the plain bearing field: spherical plain bearings, rod ends and now a much expanded range of bushings. The **new** product selection guide in this catalogue simplifies the selection of bushings from our expanded range for you.

# ing Stock Assortment

## SKF Solid Bronze

### **The all-round runner**

The traditional and robust bushing material

## SKF Sintered Bronze

### **The fast runner**

Oil impregnation allows very high sliding velocity

## SKF Wrapped Bronze

### **The cross country runner**

Excellent in dirty environments due to lubrication pockets

## SKF PTFE Composite

### **The long runner**

Long maintenance-free operating life due to low friction

## SKF POM Composite

### **The up-hill runner**

Optimal combination of low maintenance under tough running conditions

## SKF Stainless Backed Composite

### **The smooth & shiny runner**

The non-corrosive maintenance-free long runner

## SKF PTFE Polyamide

### **The jogging runner**

The cost efficient maintenance-free bushing

## SKF Filament Wound

### **The heavy duty runner**

The maintenance-free bushing for extreme running conditions

The sliding velocity can be calculated using

$$v = n \times \pi \times d / (60 \times 1\,000)$$

where

- v = sliding velocity, m/s
- n = rotational speed, r/min
- d = bore diameter of bushing, mm

The specific bearing load can be calculated using

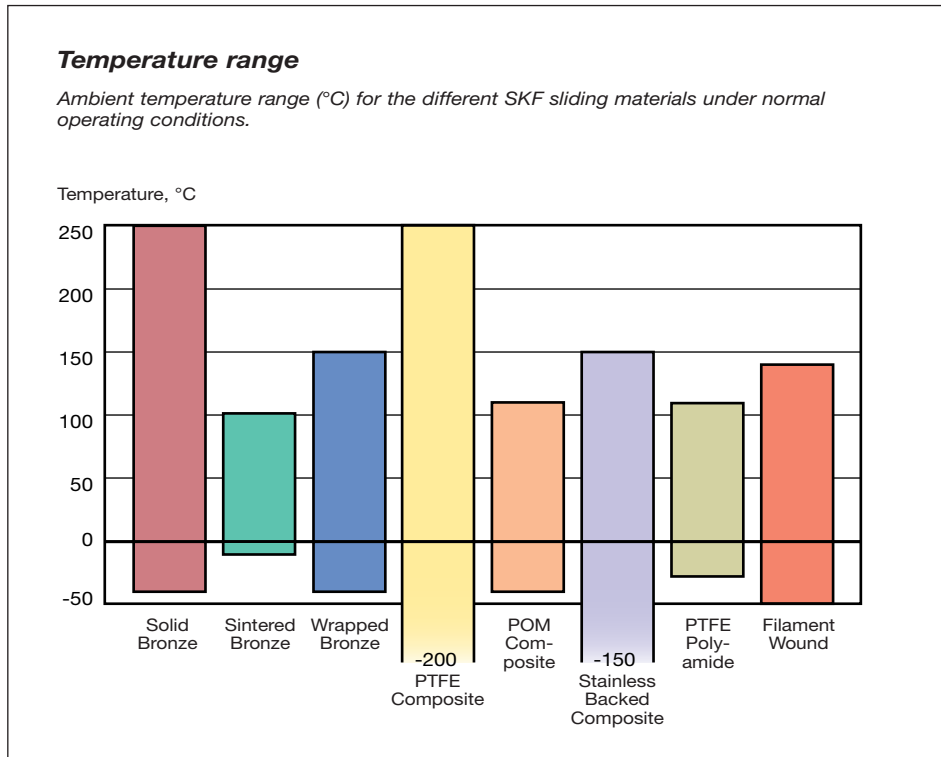

$$p = F / (d \times b)$$

where

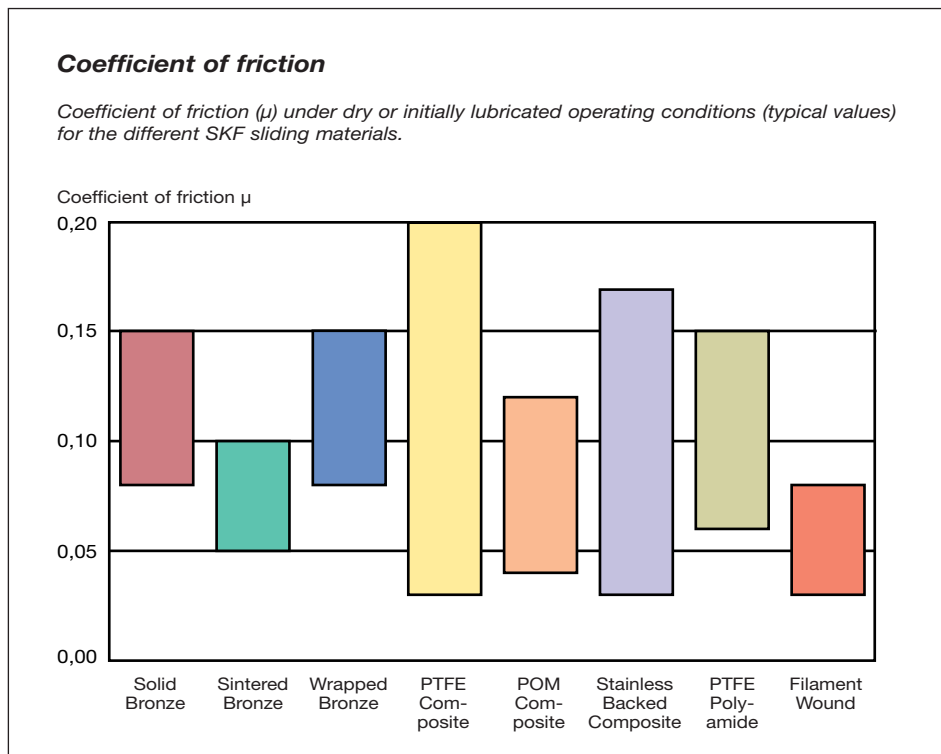

- p = specific bearing load, N/mm<sup>2</sup>
- F = bearing load, N
- d = bore diameter of bushing, mm
- b = width of bushing, mm

# Bushing Selection

## Overview of Technical Data

The temperature range for SKF Solid and Wrapped Bronze bushings can be extended by using special lubricant.

The friction of SKF sliding materials against a technical surface depends principally on the load, sliding velocity, surface roughness of the mating surface and the lubrication conditions. The lower coefficients of friction are obtained under high specific loads at low sliding velocities (not applicable to SKF Sintered Bronze).

Both higher and lower friction can occur under extreme conditions.

The load capacity for a specific application also depends on several other factors, such as type of load, sliding velocity and frequency of oscillation.

### Load capacity

Permissible specific bearing load,  $p$  (dynamic),  $N/mm^2$ , at a sliding velocity less than 0,01 m/s and permissible static load ( $N/mm^2$ ) at  $v = 0$  m/s for the different SKF sliding materials.

All sliding materials supplied by SKF can operate under rotational, oscillating and linear movements. The permissible sliding velocity for a specific application also depends on such factors as load, shaft surface and heat removed.

### Sliding velocity

Permissible continuous sliding velocity (m/s) at a load less than 1  $N/mm^2$  under dry or initially lubricated operating conditions for the different SKF sliding materials.

### Shaft recommendations

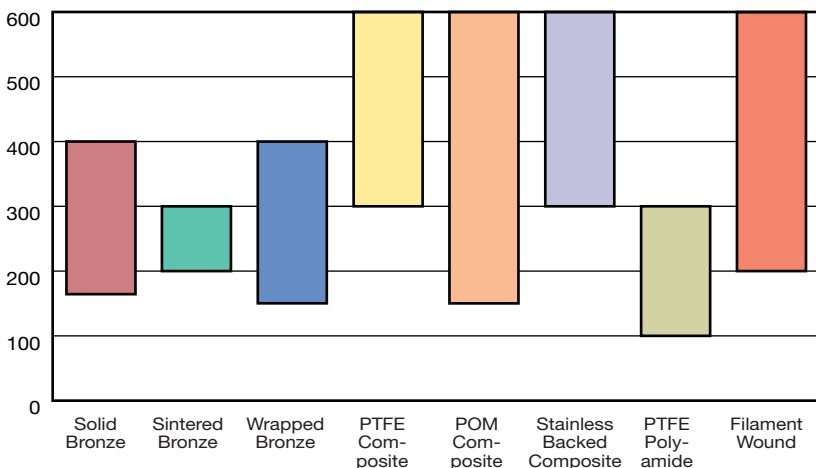

Recommended ISO tolerance, surface roughness and surface hardness of the shaft for the different SKF sliding materials.

Shaft surface roughness  $R_a$ ,  $\mu\text{m}$

Shaft surface hardness, HB

Higher tolerance grades can be used when the application demands are moderate.

The surface roughness often has a significant influence on the operating life. However, a surface roughness lower than  $0,04 \mu\text{m}$  may have a negative effect.

The heavier the load, the harder the shaft should be.

High risk for embedding inprinting will also require a harder shaft.

# SKF Solid Bronze

## The all-round runner

### THE TRADITIONAL AND ROBUST BUSHING MATERIAL

No other cylindrical bushing is used in as many and as varied applications as solid bronze bushings. The solid bronze material is ideally suited for highly demanding applications in tough environments. SKF offers a standard assortment of both plain and flanged cylindrical bushings in accordance with ISO 4379 and DIN1850.

SKF Solid Bronze bushings offer many features and advantages such as:

- insensitive to dirty environment
- resistant to shock loads and vibrations at slow speeds
- enable operation with a poor shaft surface finish
- good resistance to corrosive conditions
- lubrication groove

### MATERIAL

SKF Solid Bronze bushings are made of a multi-component bronze, CuSn7ZnPb, which has a very good sliding properties. All surfaces of the solid bronze bushings are machined.

### MAIN APPLICATIONS<sup>1)</sup>

SKF Solid Bronze bushings are intended for oscillating movements in both rotational and axial directions. SKF Solid Bronze bushings are not intended for rotating movements at medium or high speeds.

Examples of applications are:

- construction machinery
- transport equipment
- pulp and papermaking machinery
- off-shore equipment

### LUBRICATION

SKF Solid Bronze bushings are intended to be lubricated with oil or grease. Lubrication not only improves the sliding properties, but also reduces wear and prevents corrosion. Grease is usually used when lubrication is periodical, while in exceptional cases, an oil bath is used. Seals are recommended when the bushing is to be used in an aggressive environment.

All bushings with bore diameter of 14 mm and above incorporate an axial lubrication groove.

### Positioning of lubrication groove at different running conditions

rotating movement

pendulum movement

### Characteristics:

Permiss. load (dyn/stat), N/mm <sup>2</sup>	25/45
Permiss. sliding velocity, m/s	0,5
Friction coefficient $\mu$ (greased)	0,08 .. 0,15
Temperature range, °C	-40 .. +250

### Application recommendations:

Shaft tolerance	e7 – e8
Housing tolerance	H7
Shaft roughness $R_a$ , $\mu\text{m}$	< 1,0
Shaft hardness, HB	> 165

<sup>1)</sup> The performance of SKF Solid Bronze bushings depends on the interaction of load, lubrication, surface roughness, sliding velocity, and temperature encountered in specific applications.

# SKF Sintered Bronze

## The fast runner

### OIL IMPREGNATION ALLOWS VERY HIGH SLIDING VELOCITY

SKF Sintered Bronze cylindrical bushings are all self-lubricating and maintenance-free. The sintered bronze bushings consist of a porous bronze matrix impregnated with lubricant. The permissible sliding velocity for sintered bronze bushings is very high, which makes the bushings suitable for rotating applications. SKF offers a full range of both plain and flanged cylindrical bushings.

SKF Sintered Bronze bushings offer many features and advantages such as:

- very high sliding velocity
- no external lubrication required
- maintenance-free operation
- good frictional properties

### MATERIAL

SKF Sintered Bronze consists of a sintered metallic bronze and graphite matrix (1 % weight of graphite) with fully impregnated porosity. The material composition in SKF Sintered Bronze bushings is SINT A51 with a porosity volume of 28 % impregnated with mineral oil. Machining or grinding of the sliding surface of a porous sintered bushing is not recommended due to the risk of closing the bearing pores.

### MAIN APPLICATIONS<sup>1)</sup>

SKF Sintered Bronze bushings are most suitable for applications with rotating movements and where the self-lubricating performance requirements are high.

Examples of applications are:

- electrical equipment
- household equipment
- printing machinery
- machine tools

### LUBRICATION

While storing and mounting make sure that the bushing never comes into contact with any absorbent material, as this may drain the oil very quickly. It is therefore recommended to keep the bushing in the original packaging for as long as possible.

Additional lubrication is usually not necessary.

#### Characteristics:

Permiss. load (dyn/stat), N/mm <sup>2</sup>	10/20
Permiss. sliding velocity, m/s	5
Friction coefficient $\mu$	0,05 .. 0,10
Temperature range, °C	-10 .. +90

#### Application recommendations:

Shaft tolerance	f7 – f8
Housing tolerance	H7
Shaft roughness $R_a$ , $\mu\text{m}$	0,2 .. 0,8
Shaft hardness, HB	200 – 300

<sup>1)</sup> The performance of SKF Sintered Bronze bushings depends on the interaction of load, lubrication, surface roughness, sliding velocity, and temperature encountered in specific applications.

# SKF Wrapped Bronze

## The cross country runner

### EXCELLENT IN DIRTY ENVIRONMENTS DUE TO LUBRICATION POCKETS

SKF Wrapped Bronze cylindrical bushings are made completely of bronze. They are particularly suitable for applications which must be re-lubricated due to dirty environments. The sliding surface is provided with lubrication pockets which contribute to the enhanced lubrication performance. SKF offers a full range of both plain and flanged cylindrical bushings in accordance with ISO 3547 and DIN 1494.

SKF Wrapped Bronze bushings offer many features and advantages such as:

- insensitive to dirty environments
- resistant to shock loads and vibrations at slow speeds
- good resistance to corrosive conditions

### MATERIAL

SKF Wrapped Bronze is made completely of bronze, CuSn8. The bushings are produced from strips which are then wrapped and calibrated. The working surface is machined and provided with diamond shaped indentations all over its sliding surface. These indentations serve as lubricant reservoirs, where lubricant is initially filled and progressively released during operation.

### MAIN APPLICATIONS<sup>1)</sup>

SKF Wrapped Bronze bushings are suitable for both radial and axial movements. The bushings are well suited for machinery in dirty environments where shock loads and/or vibrations occur.

Examples of applications are:

- agricultural machinery
- hoisting equipment
- construction machinery
- forest machinery

### LUBRICATION

Lubrication improves the sliding properties, reduces wear and prevents corrosion since the metal surfaces of bushing and shaft are separated from each other. SKF Wrapped Bronze bushings are intended to be lubricated with grease or oil. All commonly used greases can be used. Seals are recommended when the bearing is to be used in an aggressive environment.

Diamond-shaped lubricant reservoirs

#### Characteristics:

Permiss. load (dyn/stat), N/mm <sup>2</sup>	40/120
Permiss. sliding velocity, m/s	1,0
Friction coefficient $\mu$ (greased)	0,08 .. 0,15
Temperature range, °C	-40 .. +150

#### Application recommendations:

Shaft tolerance	e7 – f8
Housing tolerance	H7
Shaft roughness $R_a$ , $\mu\text{m}$	0,4 .. 0,8
Shaft hardness, HB	150 – 400

<sup>1)</sup> The performance of SKF Wrapped Bronze bushings depends on the interaction of load, lubrication, surface roughness, sliding velocity, and temperature encountered in specific applications.

# SKF PTFE Composite

## The long runner

### LONG MAINTENANCE-FREE OPERATING LIFE DUE TO LOW FRICTION

In applications where other materials have shown insufficient operating life SKF PTFE Composite dry sliding bearings can be the solution. SKF PTFE Composite is specially designed to operate without lubricant and is particularly suited for high load/medium speed applications. SKF offers a full range of cylindrical bushings in accordance with ISO 3547 and DIN 1494 as well as flanged bushings, thrust washers and strip.

SKF PTFE Composite bearings offer many features and advantages such as:

- maintenance-free operation
- very good frictional properties
- high load capacity
- operating temperatures up to 250 °C
- sliding velocity up to 2 m/s
- small operating clearance

### MATERIAL

SKF PTFE Composite dry sliding bearings combine the mechanical strength of steel with the low friction of a PTFE-based self-lubricating sliding layer. The intermediate layer of porous tin bronze guarantees a strong bond between the backing and sliding surface and also improves the dissipation of heat generated during operation. The bearing is available in two versions. One with a sliding layer without any lead. This version has the suffix E. Another version where the sliding layer contains a minor amount of lead incorporates the suffix B. To protect the bearings from corrosion the steel backing is tin-plated. All SKF PTFE Composite dry sliding bearings can be machined, except for the sliding surface. However, a calibration is possible within certain limits.

### MAIN APPLICATIONS<sup>1)</sup>

SKF PTFE Composite dry sliding bearings are suitable for applications where the load and self-lubrication requirements are high.

Examples of applications are:

- automotive applications
- materials handling equipment
- home appliances and consumer goods
- textile machinery

### LUBRICATION

The PTFE-based sliding surface permits smooth, low-friction operation without lubrication or maintenance. During the running-in phase part of the covering layer of SKF PTFE Composite dry sliding bearings is transferred to the mating surface and forms a physically bonded lubricant film.

The presence or continuous supply of oil or other non corrosive fluids may be advantageous and improve the performance of these bearings.

Characteristics:	
Permiss. load (dyn/stat), N/mm <sup>2</sup>	80/250
Permiss. sliding velocity, m/s	2,0 (p ≤ 1,0)
Friction coefficient μ	0,03 .. 0,25
Temperature range, °C	-200 .. +250
Application recommendations:	
Shaft tolerance	f7 – h8
Housing tolerance	H7
Shaft roughness R <sub>a</sub> , μm	0 .. 0,4
Shaft hardness, HB	300 – 600

<sup>1)</sup> The performance of SKF PTFE Composite bearings depends on the interaction of load, lubrication, surface roughness, sliding velocity, and temperature encountered in specific applications.

Note: Because of the lead content, SKF PTFE Composite type B should not be used in contact with food, beverage or pharmaceutical products.

# SKF POM Composite

## The up-hill runner

### OPTIMAL COMBINATION OF LOW MAINTENANCE UNDER TOUGH RUNNING CONDITIONS

SKF POM Composite is referred to as pre-lubricated because it requires only a trace of lubricant to operate satisfactorily for long periods. The material is designed to operate with marginal lubrication and effectively fills the gap between fully lubricated bearings and dry sliding bearings. SKF offers a full range of plain cylindrical bushings in accordance with ISO 3547 and DIN 1494, as well as thrust washers and strip.

SKF POM Composite bushings offer many features and advantages such as:

- maintenance-free operation
- very good frictional properties
- high load capacity
- high sliding velocity
- small operating clearance

### MATERIAL

SKF POM Composite sliding bearings are specially designed to operate with marginal lubrication. The sliding surface has a highly effective grease retention system with lubrication pockets, which serve as grease reservoirs. SKF POM Composite consists of three bonded layers: a copper plated steel backing strip and a sintered porous tin bronze matrix covered with an acetal (polyoxymethylene, POM) resin. To protect the bearing from corrosion the steel backing is tin plated. All SKF POM Composite sliding bearings can be machined. However, any machining of the sliding surface should only be undertaken in exceptional cases.

<sup>1)</sup> The performance of SKF POM Composite bearings depends on the interaction of load, lubrication, surface roughness, sliding velocity, and temperature encountered in specific applications.

### MAIN APPLICATIONS<sup>1)</sup>

SKF POM Composite sliding bearings are suited for low-maintenance applications in tough running conditions. As a result of the lubricant retention pockets on the sliding surface, SKF POM Composite bearings are especially well suited for applications in dirty environments where lubricant cannot be supplied continuously or frequently.

Examples of applications are:

- agricultural equipment
- construction machinery
- materials handling equipment
- home appliances and consumer goods

### LUBRICATION

SKF POM Composite bearings are designed to operate with marginal lubrication and should initially be lubricated with grease. It is not necessary to re-lubricate, but the presence or continuous supply of lubricant extends bearing life considerably. To protect the mating surface against corrosion, grease can be periodically applied.

Cross section of SKF POM Composite

#### Characteristics:

Permiss. load (dyn/stat), N/mm <sup>2</sup>	120/250
Permiss. sliding velocity, m/s	2,0 (p ≤ 1,0)
Friction coefficient μ	0,04 .. 0,12
Temperature range, °C	-40 .. +110

#### Application recommendations:

Shaft tolerance	h7 – h8
Housing tolerance	H7
Shaft roughness R <sub>a</sub> , μm	0 .. 0,8
Shaft hardness, HB	150 – 600

# SKF Stainless Backed Composite

## The smooth & shiny runner

### THE NON-CORROSIVE MAINTENANCE-FREE LONG-RUNNER

SKF Stainless Backed Composite dry sliding cylindrical bushings\* are specially developed for maintenance-free applications requiring high resistance to corrosive environments. SKF Stainless Backed Composite bushings are designed to operate without lubricant and are particularly suited for highly loaded applications. SKF offers a standard assortment of plain cylindrical bushings according to ISO 3547 and DIN 1494.

SKF Stainless Backed Composite bushings offer many features and advantages such as:

- excellent resistance to corrosive conditions
- very good frictional properties
- maintenance-free operation
- high load capacity
- high sliding velocity
- small operating clearance

### MATERIAL

SKF Stainless Backed Composite is made out of a stainless steel backing strip (AISI 316TI) covered with PTFE fibres consisting of multi-filament yarns. The PTFE yarn is woven together with metal wire to produce a double-sided fabric, with only PTFE fibres on the sliding surface. The metal side of the fabric is continuously soldered to the stainless steel backing. The PTFE side of the fabric is coated with a thermosetting resin preventing creep of the fabric under heavy loads. All SKF Stainless Backed Composite dry sliding bushings can be machined. However, any machining of the sliding surface should be avoided.

### MAIN APPLICATIONS<sup>1)</sup>

SKF Stainless Backed Composite bushings are able to sustain heavy load under low sliding velocity conditions in a corrosive environment.

Examples of applications are:

- food and packaging industry
- valves and pumps
- medical equipment
- printing and papermaking machines
- off-shore industry

### LUBRICATION

SKF Stainless Backed Composite bushings are completely self-lubricating. The PTFE fibre and the thermosetting resin permit low friction operation with no lubrication or maintenance. During a brief running-in phase part of the PTFE covering layer is transferred to the mating surface.

Characteristics:	
Permiss. load (dyn/stat), N/mm <sup>2</sup>	80/300
Permiss. sliding velocity, m/s	1,5
Friction coefficient $\mu$	0,03 .. 0,08
Temperature range, °C	-150 .. +150
Application recommendations:	
Shaft tolerance	g6 – f7
Housing tolerance	H7
Shaft roughness R <sub>a</sub> , $\mu\text{m}$	0 .. 0,4
Shaft hardness, HB	300 – 600

<sup>1)</sup> The performance of SKF Stainless Backed Composite bushings depends on the interaction of load, lubrication, surface roughness, sliding velocity, and temperature

\* Branded Pydane in France. Pydane is a registered trademark of the SKF Group.

# SKF PTFE Polyamide

## The jogging runner

### THE COST EFFECTIVE MAINTENANCE-FREE BUSHING

The thermoplastic material of SKF PTFE Polyamide cylindrical bushings offers maintenance-free, dry sliding operation. SKF PTFE Polyamide bushings are designed for applications where other polymer bushings have shown insufficient operating life. The small wall thickness of these bushings ensures good heat conducting characteristics, enabling high sliding velocities. SKF offers a standard assortment of both plain and flanged cylindrical bushings according to ISO 3547 and DIN 1494.

SKF PTFE Polyamide bushings offer many features and advantages such as:

- maintenance-free operation
- cost efficiency
- excellent resistance to corrosive conditions
- electrically insulating properties

### MATERIAL

SKF PTFE Polyamide comprises a thermoplastic base material, with both PTFE additives and glass-fibre. The material mix of SKF PTFE Polyamide bushings results in self-lubricating low wear performance and, in many applications, adequate load capacity.

### MAIN APPLICATIONS<sup>1)</sup>

SKF PTFE Polyamide bushings are suitable for applications where cost effective maintenance-free bushings are preferred.

Examples of applications are:

- textile industry
- medical equipment
- fitness equipment
- household equipment

### LUBRICATION

SKF PTFE Polyamide is designed for dry operation. Lubrication can, however, improve the performance of these bushings. By continuously lubricating with grease, oil, water or other liquids, the operating speed can be increased still further. SKF PTFE Polyamide is resistant to most lubricant oils and greases.

Characteristics:	
Permiss. load (dyn/stat), N/mm <sup>2</sup>	40/80
Permiss. sliding velocity, m/s	1,0
Friction coefficient $\mu$	0,06 .. 0,15
Temperature range °C	-30 .. +110
Application recommendations:	
Shaft tolerance	h8 – h9
Housing tolerance	H7
Shaft roughness R <sub>a</sub> , $\mu\text{m}$	0 .. 0,8
Shaft hardness, HB	100 – 300

<sup>1)</sup> The performance of SKF PTFE Polyamide bushings depends on the interaction of load, lubrication, surface roughness, sliding velocity, and temperature encountered in specific applications.

# SKF Filament Wound

## The heavy duty runner

### THE MAINTENANCE-FREE BUSHING FOR EXTREME RUNNING CONDITIONS

SKF Filament Wound dry sliding cylindrical bushings are made out of resin and fibres wound in multi-layers. This material has been developed specially for applications with high loads, vibration and/or a corrosive environment. SKF Filament Wound bushings are most often interchangeable with solid bronze and steel bushings. SKF offers a standard assortment of plain cylindrical bushings in accordance with ISO 4379 and DIN 1850.

SKF Filament Wound bushings offer many features and advantages such as:

- high load capacity
- excellent resistance to shock loads and vibrations
- low sensitivity to edge pressure and misalignment
- maintenance-free operation
- excellent resistance to corrosive conditions
- very good frictional properties
- electrically insulating properties

### MATERIAL

The modern technique of fibre winding, together with a specially developed resin matrix, combines the outstanding mechanical properties of glass-fibre with the excellent tribological behaviour of PTFE and high strength thermoplastic PES fibres. All SKF Filament Wound bushings can be mechanically machined, except for the sliding layer. In all cases care must be taken to avoid an excessive temperature rise as this could damage the bearing.

### MAIN APPLICATIONS<sup>1)</sup>

SKF Filament Wound bushings are suitable in applications where high loads and vibrations occur and where maintenance-free operation is preferred.

Examples of applications are:

- construction machinery
- agricultural and forestry machinery
- hoisting and conveyor equipment
- offshore equipment
- metal working machines

### LUBRICATION

SKF Filament Wound bushings are dry running thanks to the unique sliding surface with PTFE and PES fibres in an epoxy resin. The sliding surface permits low friction operation with no lubrication or maintenance. However, the presence of lubricant offers protection against contamination and has no negative effect. Seals are recommended when the bushing is to be used in an aggressive environment.

Cross section of SKF Filament Wound

#### Characteristics:

Permiss. load (dyn/stat), N/mm <sup>2</sup>	140/200
